Long live timber!

Wood is a building material with long history and future, which breathes and lives. The protection against external influences such as wind and humidity will decide on the longevity of this raw material. Due to the multi-layer structure with ZOBEL paints and glazes we have set the course for your wooden windows and doors to ideally keep their special qualities for a long time, proper treatment provided. To conserve the value we recommend cleaning and treating your windows and doors at least once or twice a year. With freshly coated surfaces you can take your time, initial cleaning of the surfaces after min. six to eight weeks. Only use the ZOBEL Cleaner. The ZOBEL Cleaning Set contains everything you require for the ideal treatment.

The ZOBEL Cleaning Set is the only authorized care kit for timber windows and doors within the scope of the ZOBEL lifetime guarantee (ZLG).

Very simple: Ideal cleaning

Initial cleansing of the surface with warm water and a lint-free cloth. If necessary a mild cleaning agent (for example: a neutral cleaning agent) can be added to the water. Subsequently apply the ZOBEL Cleaner onto the window frame surface, wait for a few minutes and remove with the enclosed sponge and lots of water.

In the blink of an eye: Maintenance of frame and casement

In order to maintain the ideal protection of the windows and the intensity of the colour, we recommend to touch up the surface once or twice a year. With the ZOBEL Protective Emulsion you create an immaculate optical and a perfectly protected surface. Micro fine cracks, for example that have resulted from hailstones, are sealed. ZOBEL Protective Emulsion is sprayed on to the surface after it has been cleaned and dried and should be evenly spread across the surface. Polish the dry surface with a clean cloth. Pay attention to differences in gloss in case of special mat finishes.

No problem: Elimination of minor damage

Small mechanical faults, such as scratches and hairlines (diameter max. 2 cm), can be repaired without difficulty yourself. Please roughen damaged area briefly and apply the ZOBEL Protective Glaze.

Occasional treatment of the Window surface

All surfaces, especially the cross and rain water drainage areas should be checked on a regular basis – and when necessary – treated by applying a renovation coating of ZOBEL lacquers and glazes.
